

Part 1: Pre-Test & Demographics (2 minutes)

The moderator introduces the session, states that we are testing the interface and not the user, and collects basic profile info.

1. Age: 27

2. Background / Field of Study or Work: Kindergarten Teacher

3. Tech Comfort Level:

☒ Low (Basic browsing)

☐ Medium (Regular student / staff web usage)

☐ High (Advanced user / Developer)

4. Do you regularly use any built-in accessibility features on your devices? (e.g., Dark Mode, Increased Contrast, Screen Zoom, Keyboard-only navigation)

Note responses:

I sometimes use dark mode depending on the app, but otherwise, I don't use any other accessibility or display settings.

Part 2: Task-Based Testing (10 minutes)

Observe the user's behavior closely. Do not guide them unless they are completely stuck for more than 1 minute.

Task 1: First Impressions & Visual Discovery (2 mins)

Instruction to user: "Please open the test page. Look around for a moment without clicking anything and describe what you see. What stands out to you?"

User Observations:

The page is minimalist and dark. (Dark theme was active) There is not a lot of text on the page. In the middle, there is a blue square that is rotating.

Task 2: Interaction Discovery & Reduced Motion (2 mins)

Instruction to user: "Imagine the spinning square on this page is distracting to you or making you feel uncomfortable. Try to find a way to stop it from spinning."

Moderator Check: * Do they hover/interact with the widget to expand it?

Success: ☐ Easily ☒ With Difficulty ☐ Failed

User Observations:

The first thought was to click on the square, but nothing happens.

Secondly, the test person clicks on the site preferences widget. The "Reduced motion" option is noticed and opened. The user clicks on "off" and nothing happens, then asks if clicking "on" will also do nothing. They try it out, and the square stops rotating.

Task 3: Feature Exploration (2 mins)

Instruction to user: "Take a look at the settings panel again. What other options or features do you see available here? Briefly change one more setting of your choice to see what happens."

User Observations:

High contrast will change the contrast of the page. Tries it out, does not like it.

The user closes each accordion before opening a new one.

Brighter color scheme is selected. "I like this design better because it allows me to concentrate better."

The user notices that color blindness changes the color of the square.

Task 4: Accessibility / Keyboard Navigation (2 mins)

Instruction to user: "Now, please move your hands completely away from the mouse or trackpad. Using only your keyboard (such as the Tab, Spacebar, Enter, and Arrow keys), try to change the site layout to Dark Theme."

Moderator Check:

Success: ☐ Easily ☒ With Difficulty ☐ Failed

User Observations:

"I press the tab key and a border appears around the widget." Clicks enter. Arrow keys down, does not work. Again with the tab key, a "skip to navigation" link appears and confuses the user. The user clicks the link and is no longer in the widget. Needs a lot of support. Is back at the widget and does not know what to do. Now navigates with the tab key, successfully opens the color scheme, and changes the color with the arrow keys.

Task 5: Free Exploration (1 min)

Instruction to user: "Feel free to click around or interact with anything else on this page for a moment before we finish up."

User Observations:

The user is generally not confident and only tries out the features if asked directly to do so.

Part 3: Post-Test Questionnaire & Ratings (5 minutes)

Ask the participant to rate their experience and provide qualitative feedback.

1. Functionality & Clarity

"On a scale from 1 to 10 (1 = completely confusing, 10 = perfectly clear), how easy was it to figure out how to use the widget functionality?"

Score: 8 / 10

Follow-up: Was there anything unclear, confusing, or unexpected about how the panels opened or how the options worked? (e.g., *Did you realize you had to hover over the widget or click the summaries to see the options?*)

English was a difficulty. Just tried things out.

Finding it was difficult, but as soon as it was open, it was very clear.

2. Placement, Visual Styling & Size

"On a scale from 1 to 10 (1 = looks terrible/terrible placement, 10 = looks great/perfect placement), how would you rate the widget from a visual and positioning perspective?"

Score: 9 / 10

Follow-up: What could be improved visually or positionally? (e.g., *Is the bottom-left corner a good spot? Is it too small, too large, or blocking other content? Should the icon change?*)

The placement itself is good. The title on the widget was confusing. Did not dare to click on it. Would prefer an icon.

Placement in the top right might also be an option.

3. Contents

"What setting options would you think are important to have for such a widget in general?"

Switching between the light and dark theme is practical.

Making the font size larger or smaller might also be useful.

4. Everyday Context

Question: "If this widget was present across all the websites you use daily, would you find it helpful, or would you find it annoying/intrusive?"

Depending on the situation, it can be distracting. It depends on the type of page. It depends on the size.
